

2010年第5問

 数理  
石井K

5  $\log_2 x + a + c \log_x 2 = 0$  の2つの解は  $\frac{1}{4}$ , 8であり,  $\log_2 x + b + d \log_x 2 = 0$  の2つの解は  $\frac{1}{2}$ , 4となる.  $\log_2 x + b + c \log_x 2 = 0$  の2つの解のうち, 大きいほうの解の値を求めよ. ただし,  $a, b, c, d$  は実数とする.

$$\log_2 \frac{1}{4} + a + c \log_{\frac{1}{4}} 2 = 0 \quad \therefore -2 + a + c \cdot \frac{\log_2 2}{\log_2 \frac{1}{4}} = 0 \quad \therefore a - \frac{1}{2}c = 2 \dots \textcircled{1}$$

$$\log_2 8 + a + c \log_8 2 = 0 \quad \therefore 3 + a + c \cdot \frac{\log_2 2}{\log_2 8} = 0 \quad \therefore a + \frac{1}{3}c = -3 \dots \textcircled{2}$$

$$\textcircled{2} - \textcircled{1} \text{ より, } \frac{5}{6}c = -5 \quad \therefore c = -6, a = -1$$

$$\log_2 \frac{1}{2} + b + d \log_{\frac{1}{2}} 2 = 0 \quad \therefore -1 + b + d \cdot \frac{\log_2 2}{\log_2 \frac{1}{2}} = 0 \quad \therefore b - d = 1 \dots \textcircled{3}$$

$$\log_2 4 + b + d \log_4 2 = 0 \quad \therefore 2 + b + d \cdot \frac{\log_2 2}{\log_2 4} = 0 \quad \therefore b + \frac{1}{2}d = -2 \dots \textcircled{4}$$

$$\textcircled{4} - \textcircled{3} \text{ より, } \frac{3}{2}d = -3 \quad \therefore d = -2, b = -1$$

$$\therefore \log_2 x - 1 - 6 \cdot \frac{\log_2 2}{\log_2 x} = 0$$

$$(\log_2 x)^2 - \log_2 x - 6 = 0$$

$$\therefore (\log_2 x - 3)(\log_2 x + 2) = 0$$

$$\therefore \log_2 x = -2, 3$$

$$\therefore x = -\frac{1}{4}, 8$$

$\therefore$  大きい方は  $x = 8$   
 ——”
